Життя після публікації

Щасливі часи давно минули

«Нам известны имена более чем **тысячи ста** эллинистических **писателей**, **включая** сюда имена **ученых** и **философов**» *Боннар А. (1888 -1959)*
Греческая цивилизация. От Еврипида до Александрии

«Каталог писателей, просиявших во всех областях образованности,
и трудов, которые они сочинили»

120 томов Каллимаха ([305 до н. е.](#) — бл. [240 до н. е.](#))

нині

За оцінками ЮНЕСКО оцінками науковців 7,8 млн!

Звісно ані загального переліку, ані списку праць немає, але спроби є

«спасение утопающих, дело рук самих утопающих»

Ильф И, Петров Е

Чому складно оцінювати здобутки науковця?

- Важко вгадати варіації транслітерації прізвища
- Однофамільці – ускладнюють ідентифікацію, особливо якщо працюють в одній галузі і одній установі

ORCID

Did you know you can associate your ORCID ID with your ResearcherID account?

☒ I would like to create an ORCID record.

☐ I already have an ORCID record.

☐ No, thank you.

The Open Researcher and Contributor ID (ORCID, Inc.) is a non-profit organization that aims to solve the author/contributor name ambiguity problem in scholarly communication by creating a central registry of unique identifiers. These identifiers can be used within various systems you may interact with in your professional research workflow, including manuscript submission, etc.

By creating an ORCID you will be able to link your ResearcherID account with this centralized registry.

[Learn more about ORCID.](#)

If you choose not to get or associate an ORCID, you can do it at a later time.

What is ResearcherID?

ResearcherID provides a solution to the author ambiguity problem within the scholarly research community. Each member is assigned a unique identifier to enable researchers to manage their publication lists, track their Times Cited counts and *h*-index, identify potential collaborators and avoid author misidentification. In addition, your ResearcherID information integrates with the Web of Science and is ORCID compliant, allowing you to claim and showcase your publications from a single one

Abstract

SEREX methodology (SErological identification of antigens by Recombinant EXpression cloning) has been successfully used in recent years in the search for novel tumor-associated antigens in different types of human malignancies. We present in this study the results of the screening of expression libraries generated from thyroid tumors by SEREX technique. Upon screening two libraries with autologous sera 15 serum-positive clones have been isolated. Sequence analysis of positive clones followed by the search of different data bases (EMBO, GenBank and dbest) showed that 11 clones encoded already known proteins. Among those, kinectin and Tgp-associated factor are the most interesting candidates for the future development of novel diagnostic approaches.
